PAVEMENT MARKINGS

VERSION 2 – APRIL 2018

**TRIM REF: SF140543
C1850640**

Amendment Record for this Specification Part

This Specification is Council's edition of the AUS-SPEC generic specification part and includes Council's primary amendments.

Details are provided below outlining the clauses amended from the Council edition of this AUS-SPEC Specification Part. The clause numbering and context of each clause are preserved. New clauses are added towards the rear of the specification part as special requirements clauses. Project specific additional script is shown in the specification as italic font.

The amendment code indicated below is 'A' for additional script 'M' for modification to script and 'O' for omission of script. An additional code 'P' is included when the amendment is project specific.

SPECIFICATION C261 : PAVEMENT MARKINGS – VERSION 2

GENERAL

C261.01 SCOPE

1. The work to be executed under this Specification consists of the setting out, supply and application of pavement marking paint, thermoplastic pavement marking material, pavement marking tape and raised pavement markers as shown on the Drawings and in accordance with this Specification.

2. Requirements for quality control and testing, including maximum lot sizes and minimum test frequencies, are cited in the Specification Part for Quality Requirements - Version 2.

Quality

3. This specification shall not override any applicable State or Local Government legislation and shall be read in conjunction with AS 1742.3 and the Roads and Traffic Authority (NSW) RTA QA Specification R141 *Pavement Marking*.

Conformance

4. The Contractor shall give notice so that inspection may be made of all **HOLD POINTS** and **WITNESS POINTS** documented in this specification and tabulated in Annexure C261-C. Release of **HOLD POINTS** and **WITNESS POINTS** shall be made by the Superintendent, with the concurrence of the Principal Certifying Authority to be obtained, where stipulated in Annexure C261-C.

Inspections

C261.02 REFERENCE DOCUMENTS

1. Documents referenced in this Specification are listed in full below whilst being cited in the text in the abbreviated form or code indicated.

**Documents
Standards
Test Methods**

(a) Council Specifications

C201 - Control of Traffic - Version 2

(b) Australian Standards

AS 1289	Methods of testing soils for engineering purposes
AS 1289.2.1.4-2005	Soil moisture content tests - Determination of the moisture content of a soil - Microwave-oven drying method (subsidiary method)
AS 1580	Paints and related materials—Methods of test
AS 1580.107.3	Determination of wet film thickness by gauge.
AS 1742.2:2009	Traffic control devices for general use.
AS 1742.3:2009	Manual of uniform traffic control devices - Traffic control devices for works on roads
AS 1906	Retroreflective materials and devices for road traffic control purposes
AS 1906.3:1992	Raised pavement markers (retroreflective and non-retroreflective).
AS/NZS 2009:2006	Glass beads for road-marking materials.
AS 2700-1996	Colour Standards for general purposes
AS 4049	Paints and related materials—Pavement marking materials
AS 4049.1-2005	Solvent-borne paint - For use with surface applied glass beads
AS 4049.2:2005	Thermoplastic road marking materials.
AS 4049.3:2005	Waterborne paint - For use with surface applied glass beads

RTA Delineation manual 2008 Sections 1 to 5
RTA Test method T841
RTA QA Specification DCM R141 Pavement Marking

C261.03 TYPE OF MARKINGS

1. Details of the various types of pavement markings and devices are generally in accordance with the requirements of AS 1742.2. **Standard**

C261.04 TYPES OF MATERIALS TO BE APPLIED

1. The materials shall be applied as follows:

Locations for Use

- (a) **Pavement Marking Paint**
Permanent markings on all wearing surfaces. Temporary markings, other than on the final wearing surfaces. Traffic islands and kerbs where specified.
- (b) **Thermoplastic Pavement Marking Material**
Permanent markings where explicitly indicated on the Drawings.
- (c) **Pavement Marking Tape**
Temporary markings on final wearing surfaces.
- (d) **Reflective Glass Beads**
To be applied to all painted and thermoplastic markings.
- (e) **Raised Pavement Markers**
To be installed as permanent and temporary markings as shown on the Drawings.
- (f) **Cold Applied Plastics**
To be installed in accordance with manufacturer's specification

Notice to Compiler

This specification does not cover Cold Applied Plastics (CAP) although their use throughout Australia is quite common as a long life product. For details of application and installation refer to the manufacturer's specifications.

C261.05 MATERIAL QUALITY

1. The Contractor shall submit to the Superintendent NATA Registered Laboratory Test Reports, at least seven days before work is scheduled to commence, on the quality of the materials, including paint, glass beads, raised pavement markers and thermoplastic material proposed for use. This is a **HOLD POINT**.
2. Only materials conforming to the requirements of the referenced Specifications/Standards shall be used.

**Contractor's
Responsibility
(HP)****Quality
Requirements****C261.06 SETTING OUT**

1. The Contractor shall set out the work to ensure that all markings are placed in accordance with the Drawings. The work shall be set out with materials which will be easily removable upon placement of permanent markings. This action constitutes a **HOLD POINT**.
2. The locations of pavement markings shall not vary by more than 20mm from the locations shown on the Drawings.

**Contractor's
Responsibility

(HP)****Tolerance****C261.07 SURFACE PREPARATION**

1. Pavement markings shall only be applied to clean dry surfaces. The Contractor shall clean the surface to ensure a satisfactory bond between the markings and wearing surface of the pavement.
2. Pavement marking shall not be carried out during wet weather or, if in the opinion of the Superintendent, rain is likely to fall during the process (unless otherwise directed). This is a **HOLD POINT**.
3. Where raised pavement markers are specified for pavements having a concrete wearing surface, the full area under each raised pavement marker shall be lightly scabbled to remove fine mortar material (laitance).

**Clean Dry
Surface****Wet Weather

(HP)****Scabbling****C261.08 PROVISION FOR TRAFFIC AND PROTECTION OF WORK**

1. The Contractor shall provide for traffic, in accordance with the Specification for CONTROL OF TRAFFIC - VERSION 2, while undertaking the work and shall protect the pavement markings until the material has hardened sufficiently so that traffic will not cause damage.

**Contractor's
Responsibility****C261.09 MAINTENANCE OF PAVEMENT MARKINGS**

1. The Contractor shall be responsible for the maintenance, and replacement if necessary, of raised pavement markers and all pavement marking during the contract period and the contract defects liability period.

**Responsibility
in Contract
Period****PAVEMENT MARKING PAINT****C261.10 MATERIALS**

1. Paint shall comply with the requirements of AS 4049.3 and NSW Roads and Traffic Authority specifications (where applicable) as directed by the Superintendent. In this Specification, the term 'paint' shall mean 'pavement marking paint'.

Paint Quality

PAVEMENT MARKINGS

- Glass beads shall comply with the requirements of AS 2009.

**Glass Beads
Quality**

Note: This Specification details the application of class B “drop-on beads” and class D “large wet weather beads” only. Other types of glass beads may be used (refer to Annexure C261B). In each case, beads shall be specified and installed in accordance with AS 2009.

Notice to Compiler

The use of angular materials such as Quartz on transverse or longitudinal markings is not covered in this Specification. However, it is recognised as being widely used throughout Australia, in varying forms, to increase skid resistance in road markings. For details of their application and installation refer to the manufacturer’s instructions.

**Other
materials**

C261.11 MIXING OF PAINT

- All paint shall be thoroughly mixed in its original container before use to produce a smooth uniform product consistent with the freshly manufactured product.

**Uniform
Product**

C261.12 APPLICATION OF PAINT AND BEADS

- All longitudinal lines shall be sprayed by an approved self propelled machine. The two sets of lines forming a one-way or two-way barrier line pattern shall be sprayed concurrently (unless otherwise directed by the superintendent).

**Longitudinal
Lines**

- Hand spraying with the use of templates (where necessary) to control the pattern and shape shall be permitted for transverse lines, symbols, legends, arrows and chevrons.

Hand Spraying

- The paint shall be applied uniformly and the dry film thickness shall be a minimum of 0.20mm for class B beads, or 0.30mm for class D beads. This is a **WITNESS POINT**.

**Paint
Thickness
(WP)**

- Class B glass beads shall be applied to the surface of all longitudinal lines at a min application rate of 0.50 kilograms per square metre immediately after the application of the paint. The actual application rate shall be set to overcome any loss of beads between the bead dispenser and the sprayed line.

**Beads for
Longitudinal
Lines**

- Class B glass beads shall be similarly applied to all other paint markings at a min application rate of 0.30 kilograms per square metre immediately after application of the paint by a method approved by the Superintendent. Class D glass beads shall be similarly applied to all other markings at a min application rate of 0.5kg/m².

**Beads for
other
Markings**

- Pavement markings shall be straight or with smooth, even curves where intended. All edges shall have a clean, sharp cut off. Any marking material applied beyond the defined edge of the marking shall be removed leaving a neat and smooth marking on the wearing surface of the pavement.

**Pavement
Marking Finish**

- The lengths of longitudinal lines shall conform to any applicable local or state requirements and not vary by more than +20mm -0mm from the lengths shown in AS 1742.2 The widths of longitudinal lines shall not vary by more than +10mm -0mm from the widths shown in AS 1742.2.

**Longitudinal
Line
Tolerances**

- The lengths and widths of transverse lines shall not vary by more than 10mm from the lengths and widths shown in AS 1742.2.

**Transverse
Line Tolerance**

9. The dimensions of arrows, chevrons, painted medians, painted left turn islands and speed markings shall conform to any applicable local or state requirements and shall not vary by more than 50mm from the dimensions shown on the Drawings or in AS 1742.2 as appropriate. Arrows and speed markings shall be placed square with the centreline of the traffic lane.

**Arrows;
Chevrons
Tolerance**

Notice to Compiler

Class D beads are not suited for use with solvent-based paints (AS 4049.1). Class D beads are suited for use with thermoplastic (AS 4049.2) and with waterborne paint (AS 4049.3). Class D beads intended for use with thermoplastic shall be supplied with a proprietary adhesive coating which shall be clearly labelled on the packaging.

C261.13 FIELD TESTING

1. The thickness of the wet film applied to the road pavement shall be checked by the method described in AS 1580.107.3 Method B, comb gauge.

**Paint
Application**

2. The application rate of glass beads applied to the surface of the markings shall be checked by the method described in Annexure C261-A and as quantified in Table 261.1.

**Beads
Application**

Road Speed km/h	Line Widths				
	80mm	100mm	120mm	150mm	200mm
8	396	495	594	742	990
13	643	804	965	1207	1698
16	791	990	1188	1484	1484

1. Tolerance of +10% shall be permissible when measuring the above volume.
2. When two or more glass bead dispensers are to be used, each dispenser shall be checked separately to make up the totals shown.
3. Glass beads weigh approximately 1.53 grams per millilitre.

Table C261.1 - Volume of glass beads (ml) required in 10 seconds of operation

THERMOPLASTIC PAVEMENT MARKING MATERIAL

C261.14 MATERIALS

1. Thermoplastic pavement marking material shall comply with the requirements of AS 4049.2.

**Thermoplastic
Quality**

2. In this Specification, the term 'thermoplastic material' shall mean 'thermoplastic pavement marking material'.

Definition

3. Glass beads shall be incorporated in thermoplastic material, in the proportion of a min 20% of the total mass, as part of the aggregate constituent and shall comply with the requirements of AS 2009, Intermix type class C beads with 20-30% by mass wet weather beads.

**Glass Bead
Proportion**

4. Glass beads for surface application shall comply with the requirements of AS 2009, class B "Drop-on beads" or class D "wet weather beads".

**Glass Bead
Quality**

5. Tack coat material shall be to the manufacturer's specification as approved by

Tack Coat

PAVEMENT MARKINGS

the Superintendent. This is a **HOLD POINT**.

(HP)

C261.15 PREPARATION OF THERMOPLASTIC MATERIAL ON SITE

1. Immediately before application, the thermoplastic material shall be uniformly heated in a suitable kettle to the temperature recommended by the manufacturer. The thermoplastic material shall not be heated above the temperature recommended by the manufacturer. The thermoplastic material shall not remain molten for more than six hours for hydrocarbon resins and four hours for wood and gum resins. Should overheating occur and/or the time expire for molten materials, then the thermoplastic material shall be discarded.

Heating

C261.16 APPLICATION OF THERMOPLASTIC MATERIAL AND BEADS

1. Where the wearing surface of the pavement is smooth or polished, a tack coat of material may be required by the Superintendent and shall be applied in accordance with the recommendations of the thermoplastic manufacturer. The tack coat shall be applied immediately before the application of the thermoplastic material in accordance with the directions of the manufacturer of the thermoplastic material and the manufacturer of the tack coat material.

Tack Coat Requirement

2. All longitudinal lines shall be sprayed (or extruded in the case of profiled markings) by a self propelled machine approved by the Superintendent. This is a **WITNESS POINT**. The two sets of lines forming a one-way or two-way barrier line shall be sprayed concurrently. The thermoplastic material shall be applied uniformly and the cold film thickness shall be 3.0mm with a tolerance of plus or minus 0.5mm.

Longitudinal Lines (WP)

3. Class B glass beads shall be applied by air propulsion or gravity fed to the surface of all longitudinal lines at a net application rate of 0.30 kilograms per square metre immediately after application of the thermoplastic material. The actual application rate shall be set to overcome any loss of beads between the bead dispenser and the sprayed line. Class D glass beads shall be applied at a min rate of 0.5kg/m².

Beads for Longitudinal Lines

4. Where transverse lines, symbols, legends and arrows are to be screeded, the screeded thermoplastic material shall be applied using a mobile applicator, approved by the Superintendent, and templates to control the pattern. This is a **WITNESS POINT**.

Screed (WP)

5. The thermoplastic material for transverse lines, symbols, legends and arrows shall be applied uniformly and the cold film thickness shall be 3.5mm with a tolerance of plus or minus 0.5mm. The surface finish shall be smooth.

Tolerance

6. Class B glass beads for other than longitudinal lines shall be uniformly applied to screeded markings at a min application rate of 0.30 kilograms per square metre immediately after application of the thermoplastic material by a method approved by the Superintendent. Class D glass beads shall be applied at a min application rate of 0.50kg/m².

Beads for Other Markings

7. Pavement marking shall be straight or with smooth, even curves where intended. All edges shall have a clean, sharp cut off. Any marking material applied beyond the defined edge of the marking shall be removed leaving a neat and smooth marking on the wearing surface of the pavement.

Pavement Marking Finish

8. The lengths of longitudinal lines shall not vary by more than 20mm from the lengths shown in AS 1742.2. The widths of longitudinal lines shall not vary by more than 10mm from the widths shown in AS 1742.2.

Longitudinal Line Tolerances

9. The lengths and widths of transverse lines shall not vary by more than 10mm from the lengths and widths shown in AS 1742.2.

Transverse Line Tolerances

10. The dimensions of arrows, chevrons, painted medians, painted left turn islands and speed markings shall conform to any applicable local or state requirements and not vary by more than 50mm from the dimensions shown on the Drawings or in AS 1742.2 as appropriate. Arrows and speed markings shall be placed square with the centreline of the traffic lane.

**Arrows,
Chevrons,
Tolerance**

Notice to Compiler

Glass beads of class D wet weather beads intended for use with thermoplastic applications shall be supplied with a proprietary adhesive coating, & shall be clearly labelled on the packaging.

C261.17 FIELD TESTING

1. The thickness of the cold film of thermoplastic material applied to the road pavement shall be checked by measurement, using a micrometer, of the thickness of thermoplastic material applied to a metal test plate. This is a **WITNESS POINT**.

**Thickness of
Thermoplastic
Material (WP)**

2. The application rate of glass beads applied to the surface of the markings shall be checked by the method described in Annexure C261A. This is a **WITNESS POINT**.

**Glass Beads
Application
Rate (WP)**

PAVEMENT MARKING TAPE

C261.18 MATERIALS

1. Pavement marking tape shall be a strippable type of tape approved by the Superintendent. This is a **HOLD POINT**.

Brands (HP)

C261.19 APPLICATION OF PAVEMENT MARKING TAPE

1. The method of application of pavement marking tape, including surface preparation, shall be in accordance with the manufacturer's recommendations.

**Manufacturer's
Recommendation**

C261.20 REMOVAL OF PAVEMENT MARKING TAPE

1. When directed by the Superintendent, the Contractor shall remove pavement marking tape in accordance with the manufacturer's recommendations. This is a **WITNESS POINT**.

**Manufacturer's
Recommendation
(WP)**

RAISED PAVEMENT MARKERS

C261.21 MATERIALS

1. Raised pavement markers, both reflective and non-reflective, shall comply with AS 1906.3 and shall have the dimensions shown on the Drawings.

Standard

2. The adhesive used for attaching the raised pavement markers to the wearing surface of the pavement shall be a hot melt bitumen adhesive or an equivalent product approved by the Superintendent. This is a **HOLD POINT**.

**Bitumen
Adhesive (HP)**

C261.22 INSTALLATION OF RAISED PAVEMENT MARKERS

1. Raised pavement markers shall be fixed to the wearing surface of the pavement using a hot melt bitumen adhesive or an equivalent product. The adhesive shall be freshly heated to the Manufacturer's instructions and thoroughly mixed. The adhesive shall not be allowed to cool and be reheated prior to use.

Adhesive Quality

2. The adhesive shall be spread uniformly over the underside of the raised pavement marker to a depth of approximately 10 mm. The raised pavement marker shall be pressed down onto the pavement surface in its correct position and shall be rotated slightly until the adhesive is squeezed out around all edges of the marker. The raised pavement marker shall not be disturbed until the adhesive has set.

Method

3. On rough surfaces, such as newly laid coarse sprayed bituminous seals, and where directed by the Superintendent, an initial pad of adhesive of diameter 20mm larger than the diameter of the base of the raised pavement marker, shall be provided. The adhesive shall be applied to fill the irregularities in the pavement surface to produce a flat, smooth surface flush with the upper stone level. The adhesive pad shall be allowed to set. Additional adhesive shall be applied to the pavement, as described above, and then the raised pavement marker shall be pressed down onto the adhesive pad on the pavement surface to ensure good adhesion.

Rough Surfaces

REMOVAL OF PAVEMENT MARKINGS

C261.23 GENERAL

1. The Contractor shall remove pavement markings, no longer required, from the wearing surface of pavements without significant damage to the surface. The removal of markings shall be performed in a "block type manner, so as to avoid "ghosted" images. Blacking out of markings should only be used as a temporary measure and complete removal should occur within 48 hours.

Undamaged Pavement

2. The method of removal shall be approved by the Superintendent before commencement of the work. This is a **HOLD POINT**.

Removal Method (HP)

LIMITS AND TOLERANCES

C261.24 SUMMARY OF LIMITS AND TOLERANCES

1. The limits and tolerances applicable to the various clauses of this Specification are summarised in Table C261.2 below:

Item	Activity	Limits/Tolerances	Spec Clause
1.	Location of Markings	±20mm from specified location	C261.06
2.	Longitudinal Lines		C261.12
	(a) Length	+20mm -0mm from lengths shown in AS 1742.3	C261.16
	(b) Width	+10mm -0mm (except for double barrier lines where the gap between lines must not decrease) from widths shown in AS 1742.3	C261.12 C261.16
3.	Transverse Lines		
	(a) Length)	±10mm from lengths and widths shown in AS 1742.3	C261.12
	(b) Width)		C261.16
4.	Arrows, Chevrons, Painted Medians, Speed Markings etc.	±50mm from the dimensions shown in AS 1742.3	C261.12 C261.16
5.	Application of Paint		
	(a) Film Thickness	Depends on the beads to be used: for class B beads – min 0.2mm dry film; for class D beads – min 0.3mm dry film	C261.12
6.	Application of Thermoplastic		
	(a) Longitudinal Lines - Cold Film Thickness	3.0mm ± 0.5mm	C261.16
	(b) Transverse Lines, Symbols, Arrows etc. Cold Film Thickness	3.5mm ± 1.5mm	C261.16
7.	Glass Beads		
	(a) Volume used in operation	Min class B - 0.30 kg/m ² Min class D - 0.50 kg/m ²	C261.12 C261.16

Table C261.2 - Summary of Limits and Tolerances

SPECIAL REQUIREMENTS

C261.25 RESERVED

C261.26 RESERVED

C261.27 RESERVED

MEASUREMENT AND PAYMENT

C261.28 PAY ITEMS

1. Payment shall be made for all activities associated with completing the work detailed in this Specification on a schedule of rates basis in accordance with Pay Items C261(a) to C261(e) inclusive.
2. A lump sum price for any of these items shall not be accepted.
3. If any item, for which a quantity of work is listed in the Schedule of Rates, has not been priced by the Contractor, it shall be understood that due allowance has been made in other items for the cost of the item which has not been priced.
4. No additional payment shall be made for maintenance and replacement of pavement markers in accordance with Clause C261.09.
5. Provision for traffic is measured and paid in accordance with this Specification and not in the Specification for CONTROL OF TRAFFIC - VERSION 2.

Pay Item C261(a) PAVEMENT MARKING PAINT - LONGITUDINAL LINES

1. The unit of measurement shall be per line pattern kilometre (including any gaps).
2. The area shall be calculated from the specified width (excluding tolerances) and the actual application length measured along the centre line of the longitudinal line.
3. The schedule rate shall cover all costs associated with the setting out of the work, the supply and application of the paint and beads and provision for traffic control.

Pay Item C261(b) PAVEMENT MARKING PAINT - TRANSVERSE LINES, SYMBOLS, LEGENDS, ARROWS, CHEVRONS, TRAFFIC ISLANDS AND KERBS

1. The unit of measurement shall be as per schedule below;

Transverse lines	lineal metres
Arrow	Each
Symbols	Each
Chevrons	Square Metres
Kerbs	Metres
Traffic Islands	Square Metres
Legends	Each or Square Metres.
2. The area of the painted surface shall be determined by direct measurement of the markings as applied.
3. The schedule rate shall cover all costs associated with the setting out of the work, the supply and application of all material and the provision for traffic control.

Pay Item C261(c) THERMOPLASTIC PAVEMENT MARKING MATERIAL - LONGITUDINAL LINES

1. The unit of measurement shall be per line pattern kilometre (including any gaps).
2. The area shall be calculated from the specified width (excluding tolerances) and the actual application length measured along the centre line of the longitudinal line.
3. The schedule rate shall cover all costs associated with the setting out of the work, tack coating where necessary, the supply and application of the thermoplastic material and beads and provision for traffic.

Pay Item C261(d) THERMOPLASTIC PAVEMENT MARKING MATERIAL - TRANSVERSE LINES, SYMBOLS, LEGENDS AND ARROWS

1. The unit of measurement shall be as per schedule below:

Transverse lines	lineal metres
Arrow	Each
Symbols	Each
Chevrons	Square Metres
Kerbs	Metres
Traffic Islands	Square Metres.
Legends	Each or Square Metres.
2. The surface area of the thermoplastic material applied shall be determined by direct measurement of the markings as applied (as above).
3. The schedule rate shall cover all costs associated with the setting out of the work, tack coating where necessary, the supply and application of all material and the provision for traffic.

Pay Item C261(e) RAISED PAVEMENT MARKERS (all applications)

1. The unit of measurement shall be 'each' raised pavement marker installed.
2. The schedule rate shall cover all costs associated with the setting out of the work, the supply and application of all material including the provision of an initial pad of adhesive when required on rough surfaces and the provision for traffic.

ANNEXURE C261- A

PROCEDURE FOR MEASUREMENT OF RATE OF APPLICATION OF SPHERICAL GLASS BEADS

1. SCOPE

The following procedure shall be adopted for field measurement of the rate of application of spherical glass beads on to wet paint or thermoplastic surfaces.

2. SPHERICAL GLASS BEADS

The glass beads shall comply with AS 2009.

3. MEASUREMENT

The method of field measurement shall be as follows:

- (a) Turn off the paint or thermoplastic supply valves and operate the glass bead dispenser for exactly 10 seconds allowing glass beads to run into a plastic bag or tray.
- (b) Pour the glass beads from the bag or tray into a suitable measuring cylinder calibrated in millilitres to measure the volume of glass beads collected. Level but do not compact the glass beads in the cylinder.
- (c) Compare the volume of glass beads collected with the correct figure given in Table C261.1.

Table C261.1 shows the correct volumes of glass beads required to give a net application rate on the marked line of approximately 0.30 kilograms per square metre for different line widths and road speeds. The glass bead volume figures given in Table C261.1 are calculated for an actual application rate of 0.34 kilograms per square metre. These figures are used for calibrating the machine because there is a loss of beads between the bead dispenser and the marked line and the volume is measured with beads not compacted. For the calibration of application rates to suit class D beads, the above table will need to be altered to 0.50kg/m².

ANNEXURE C261 - B

TYPES OF GLASS BEADS

1. CLASS A BEADS (PREMIX)

Class A beads are mixed into road-marking material by the manufacturer prior to application, and are intended to provide retroreflectivity throughout the life of the marking. These beads are to be mixed at a rate of not less than 30% by mass.

2. CLASS B BEADS (DROP-ON)

Class B glass beads are applied under gravity or pressure as a surface application to a wet film of pavement marking to provide initial retroreflectivity. These beads should be applied on a smooth substrate. A nominal rate of 270-300 g/m² may be appropriate, while a coarse surface substrate usually requires a higher application rate to achieve the required level of retroreflectivity.

NOTE: These beads have a moisture-proof coating to facilitate flow and reduce the risk of “caking”

3. CLASS C BEADS (INTERMIX)

Class C beads are mixed into thermoplastic road-marking material by the manufacturer prior to application, and are intended to provide retroreflectivity throughout the life of the marking. They should be intermixed at a rate of not less than 20% by mass. Class C beads may also be used for surface applications to a wet film of pavement marking to provide initial retroreflectivity. They should be applied on a smooth substrate. A nominal rate of 350 g/m² may be appropriate, while a coarse surface substrate usually requires a higher rate of application to achieve the required level of retroreflectivity.

NOTE: These beads are not moisture-proof coated, and, if used for surface applications, could “cake” during handling.

4. CLASS D BEADS (LARGE WET-WEATHER BEADS)

Class D glass beads are applied under gravity or pressure as a surface application to a wet film of pavement marking to provide initial retroreflectivity. They should be applied on a smooth substrate. A nominal rate of 500 g/m² may be appropriate, while a coarse surface substrate usually requires a higher rate of application to achieve the required level of retroreflectivity.

NOTE: These beads have no moisture-proof coating and are, therefore, also suitable for intermixing into thermoplastic road-marking material to provide retroreflectivity in both dry and wet conditions, throughout the life of the marking. They should be intermixed at a rate of not less than 20% by mass.

ANNEXURE C261- C

INSPECTIONS

Give notice so inspection may be made of the following:

Summary of HOLD POINTS

Clause title/subclause	Requirement	Notice for inspection	Release by
GENERAL			
Setting Out			
C261.06.1 – Contractor's Responsibility	Obtain approval for set out	3 days	Superintendent
Material Quality			
C261.05.1 – Contractor's Responsibility	Submit NATA Test Reports on materials	14 days before work is scheduled to commence	Superintendent – PCA concurrence required
Surface preparation			
C261.07.2 – Wet Weather	Obtain direction on suspension of work	Progressive	Superintendent
THERMOPLASTIC PAVEMENT MARKING MATERIAL			
Materials			
C261.14.5 – Tack Coat	Obtain approval for tack coat material	7 days before work is scheduled to commence	Superintendent
PAVEMENT MARKING TAPE			
Materials			
C261.18.1 - Brands	Obtain approval for type of strippable tape	7 days before work is scheduled to commence	Superintendent
RAISED PAVEMENT MARKERS			
Materials			
C261.21.2 – Bitumen Adhesive	Submit adhesive for approval	7 days before work is scheduled to commence	Superintendent
REMOVAL OF PAVEMENT MARKINGS			
General			
C261.23.2 – Removal Method	Submit method for approval	7 working days before commencement of the activity	Superintendent

PAVEMENT MARKINGS

Summary of WITNESS POINTS

Clause title/subclause	Requirement	Notice for inspection
PAVEMENT MARKING PAINT		
Application of Paint and Beads		
C261.12.3 - Paint Thickness	Application of paint and beads to be checked for quality	Progressive
THERMOPLASTIC PAVEMENT MARKING MATERIAL		
Application of Thermoplastic Material and Beads		
C261.16.2 – Longitudinal Lines	Self propelled spraying machine to be approved by the Superintendent	Progressive
C261.16.4 - Screed	Mobile applicator to be approved by the Superintendent	Progressive
Field Testing		
C261.17.1 – Thickness of Thermoplastic Material	Confirm thickness by micrometer measurement	Progressive
C261.17.2 – Glass Beads Application Rate	Confirm application rate	Progressive
PAVEMENT MARKING TAPE		
Removal of Pavement Marking Tape		
C261.20.1 – Manufacturer’s Recommendation	Direction to remove tape	Progressive
